

LINC UP IN VIETNAM

LINC ENERGY IS JOINING FORCES WITH Vietnam's Vinacomin and Song Hong Energy plus the Marubeni Corporation of Japan to move ahead with their major underground coal gasification (UCG) project in Vietnam. Linc Energy and partners will press

ahead with the Tonkin project in the Red River Delta region of Vietnam, aiming to deliver power to more than six million households in Vietnam using Linc Energy's UCG technology. Stage one is a trial UCG field in the Red River Delta.

Linc Energy's CEO, Peter Bond said, "The finalisation of these contracts is a

major step for Linc Energy towards its goal of bringing power generation fuelled by competitively priced UCG synthesis gas to countries like Vietnam that have increasing demands for power supply. Our work in Vietnam demonstrates the potential for UCG to be the world's next major energy source." www.lincenergy.com.au ■
